Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from a cloned population of Trypanosoma brucei (TREU927/4 GUTat 10.1) was mechanically sheared to give a tight size distribution (approx 2 kb).
Trypanosoma brucei (TREU927/4 GUTat 10.1) was mechanically sheared to give a tight size distribution (approx 2 kb).
The v + i method used for the library construction is described in detail in Smith, H.O. and Venter, J.C.
(Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing Press, Decical Maproach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."

• Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley prosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: on by sp, the same strain used for the BDGP's pl and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or fillters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila The BDGP is constructing a physical map of the Drosophila please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and melanogaster BAC library was prepared by Kazutoyo Osoegawa and melanogaster BAC library was prepared by the BDGP Drosophila NV. The library is named RECI-99 and was constructed by partial EcorI digestion of Drosophila DNA provided by the BDGP from the Isogenic strain v2: on bw sp, the same strain used for the BDGP's pland EST library is named RECI-99 and was constructed by larany pland EST library is nore detailed description of the library and how to order individual BAC clones, the entire library, or filters for hypridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Drosophila melanogaster genome survey sequence T7 end of BAC # BACR14N11 of RPCI-98 library from Drosophila melanogaster (fruit fly), genomic survey sequence.

Dictyostellum discoideum.
Dictyostellum discoideum.
Dictyostellum discoideum
Eukaryota; Mycetozoa; Dictyostellida; Dictyostellum.
1 (bases 1 to 540)
Morio, T., Urushihara, H., Salto, T., Ugawa, Y., Mizuno, H., Yoshida, M., Yoshino, R., Mitra, B.N., Pi, M., Sato, T., Takemoto, K., Yasukawa, H., Williams, J., Maeda, M., Takeuchi, I., Ochial, H. and Tanaka, Y.
The Dictyostellum developmental cDNA project: generation analysis of expressed sequence tags from the first-finger stage of development.

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information plaase see http://www.fruitfly.org The BDGP prosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the lisogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library
                                                                                                                                                     Ĥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Drosophila melanogaster genome survey sequence TET3 end of BAC # BACRL4D11 of RPCI-98 library from Drosophila melanogaster (fruit fly), genomic survey sequence. The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein (I) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as can be used in vaccines. (II), and its truncated versions, are used as infections, particularly otitis media in humans. (II) is also used as antiection in particularly office media in humans. (II) is also used as a netion in immunoasays for detecting specific antibodies (Ab), and to artical as probes for recombinant production of (II) and its generate Ab. (I) are used as probes for identifying/Choining 200 kDa protein fragments are used as probes for identifying/Choining 200 kDa protein (I) makes possible production of large amount of recombinant immunogens. (I) makes possible production of large amount of recombinant immunogens. (I) makes possible production of large amount of recombinant immunogens. Characts the Escherichia coll host. The present sequence represents the containing and the present invention. English 5A-Y; 247pp; Claim

```

38; that encodes a 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used for recombinant production of (II) and its genes from other strains, and for idagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein M. catarrhalis strain Q8 200kDa protein, which is given in the exemplification of the present invention. 410 460 519 234 292 294 353 401 583 621 681 Gaps 61 LNGSAYAQN-NSKIAFGTTGNNDN----ASASNEASIAIGSLAKAHANQAIAIGGSKPD 114 9 ngdlvdssgnittptynisvkttklnsngtsgnnkfsvsnahdnnslvtakdladylnkv 1 mnhiykvifnkatgtfmavaeyakshstgggscatggvgsvrtlsfariaalavlvigat 344 KAVENLAKRQITFK--GDDNGTGVKKKLGETLTIKGGETQADKLTDNNNIGVVTDNNTGL KVKLAKNLSGLETVSTKNLTASEKVTV-GSGNNTAELQSGGLTFTPTTNASTDKTVYGTD GLKFTDNSNT-ALEDTTRITKDKIGFSNKAGTVDENKPYLDKDKLKVGNSTLNNGGLTVN NTIGGSNKQIQVGADGIKFADVNVNVSN-AAKFGTTRITEEEIGFADADGKVDKKSPYLD 1 MNHIYKVIFNKATGTFMAVAECAKSHSGGSSSSTAGQVGSSPVIRLTRVATLAILVIGAT 115 PRNQAANQKAGSHAKGKESIAIGGDVLAEGDASIAIGSDDLYLDRN-STNSKYPNGLLST 174 LIQNHTVLRQIRDS-NGSQKYRRTAAEGHASTAVGAMAYAKGHFANAFGTRSTAEGNYSL 233 AVGLTAKAEKGYTIAIGSNAQAINYGALALGADTRVDLDYGIALGYGSQILNNNNNNNK AYVPEGNGSNIKSSKATGNG----LFSIG-----SSTIKRKIINVGAGYEDTDAVNVAQL QQDADGALQSFSIR--DEKGQEFTISNLYSNGNTPNTFETITFAGENGISISNDIAKGKV DB 22; Length 2053; 250; Indels 481; KKQLQVGGVKITKDSGINAGDQKISNVKDATDDTDAVTYKQLK----Query Match

XX DR XX TP	WPI; 2001-159722/16. N-PSDB; AAF59102, AAF59103. New nucleic acid encoding Moraxella catarrhalis outer membrane protein

2001

14:18:07

Sep

generate Ab. (1) are used for recombinant production of (11) and its fragments are used as probes for identifying/cloning 200 kba protein genes from other strains, and for diagnostic detection of M. catarrhalis. (1) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (11) reduces toxicity of the protein M. catarrhalis strain 4223 genomic 200kDa protein, which is given in the exemplification of the present invention. The present invention describes an isolated and purified nucleic acid (I that encodes a 200 kDa outer membrane protein of Moravatla catarrhalis. The 200 kDa outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunosenic compositions and vaccines to protect against M. catarrhalis infections, particularly office media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to diagnosis for in protective vaccines and Claim 1; Fig 3A-W; 247pp; English. useful

The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein (II) has antibacterial activity and correct acid of the compositions and vaccines to protect against M. catarrhalis infections, particularly otilis medla in humans. (II) is also used as confections, particularly otilis medla in humans. (II) is also used as confections, particularly otilis medla in humans. (II) is also used as confections, particularly of the recombinant production of (II) and its generate Ab. (I) are used for recombinant production of (II) and its generate Ab. (I) are used as probes for identifying/cloning 200 kDa protein fragments are used as probes for identifying/cloning 200 kDa protein confers from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. The present sequence represents the cowards the Escherichia coll host. The present sequence represents the consequence in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             48;

An approx. 200 kDa outer membrane protein (AAW04505) can be isolated from Moraxella catarhalis otitis media strain 4223 by electroelution, or expressed from a gene (see also AAT38740) obtd. from a strain 423 genomic library. Natural or recombinant outer membrane protein is useful as an immunogen to protect against infection by Moraxella, esp. M. catarhalis. It can also be used to detect antibodies, esp. for differential diagnosis between bacteria that cause similar symptoms, and also useful as a carrier for other antigens and used to raise antitumour antibodies for conjugation to therapeutic agents.

that encodes a 200 kbs outer membrane protein of Morakella catarrhalis.

The 200 kbs outer membrane protein of Morakella catarrhalis.

The 200 kbs outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as infections, particularly otitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kbs protein genes from other strains, and for diagnostic detection of M. catarrhalis.

(I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coll host. The present sequence represents the cempalification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           48;
                                                                                                                                present invention describes an isolated and purified nucleic acid (I)
     outer membrane protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       402

                                                                                                                                                 Haemophilus adhesion protein HAZ (AAR99393) is associated with the formation of surface fibrils involved in adhesion to various host cells; it is also referred to hsf (Haemophilus surface fibrils). Its amino acid sequence was deduced from a genomic DNA clone (AAM44476) derived from Haemophilus influence type b strain C65. Large quantities of recombinant HAZ can be produced in transformed prokaryotic or eukaryotic host cells, for use in vaccines against

The present sequence represents a Haemophilus influenzae adhesin

(Hia) protein from the type c Haemophilus influenzae strain API.

(Hia) protein from the type c Haemophilus influenzae strain API.

Hia genes and proteins have antiinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An activities, and can be used in the production of a vaccine from the production of a vaccine. An activities, and can disease caused by Hemophilus strains in a protection against disease caused by Hemophilus strains in a susceptible host, preferably a human. An Hia protein is useful as an antigen, in immunogenic preparations including vaccines, as a carrier of for other immunogenic acused by the infection of Haemophilus is useful for treating diseases caused by the infection of Haemophilus influenzae such as meningitis, epiglottitis, septicaemia and otitis media. Recombinant production of Hia favours high recovery of the protein compared to the low recovery of institute protein from Haemophilus influenzae species. A truncated protein has a significantly higher compared to the length protein.

```
The present sequence represents a Haemophilus influenzae adhesin (Hia)

protein from the non-typeable Haemophilus influenzae (NTH1) strain 29,

protein from the non-typeable Haemophilus influenzae (NTH1) strain 29,

Hia genes and proteins have antiinflammatory, auditory and antibacterial

cativities, and can be used in the production of a vaccine. An

cativities, and can be used in the production of a vaccine. An

composition composition comprising an Hia gene, a polypeptide encoded

protection against disease caused by Hemophilus strains in a

cativities host, preferably a human. An Hia protein is useful as an

cantigen, in immunogenic preparations including vaccines, as a carrier

antigen, in immunogenic preparations including vaccines, as a carrier

con other immunogenic preparations including vaccines, as a carrier

is useful for treating diseases caused by the infection of Haemophilus

in luenzae such as meningitis, epidlotitis, septicaemia and otitis

in including recombinant production of Hia favours high recovery of the

media. Recombinant production of Hia favours high recovery of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Haemophilus influenzae adhesin; NTHi; infection; vaccine;

The present sequence represents a Haemophilus influenzae adhesin (Hia) protein from the non-typeable Haemophilus influenzae (NTH1) strain K22. Hia genes and proteins have antiinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by a recombinant Hia polypeptide is useful for inducing protection against disease caused by Haemophilus strains in a susceptible host, preferably a human. An Hia protein is useful as an antigen, in immunogenic preparations including vaccines, as a carrier for other immunogens, and in the generation of diagnostic reagents. Hia is useful for treating diseases caused by the infection of Haemophilus influenzae such as meningitis, epiglottitis, septicaemia and otitis media. Recombinant production of Hia favours high recovery of the protein compared to the low recovery of native protein from Haemophilus influenzae species. A truncated protein has a significantly higher amount of recovery than a full-length protein.

The present sequence represents a Haemophilus influenzae adhesin (Hia)

C protein from the non-typeable Haemophilus influenzae (NTH1) strain M407.

C Ha genes and proteins have antiinflammatory, additory and antibacterial

C Hia genes and can be used in the production of a vaccine. An

activities, and can be used in the production of a vaccine. An

c activities, and can be used in the propertied is useful for inducing

C munogenic composition comprising an Hia gene, a polypeptide encoded

immunogenic composition comprising an Hia polypeptide is useful for inducing

c protection against disease caused by Heemophilus strains in a

susceptible host, preferably a human. An Hia protein is useful as an

antigen, in immunogenic preparations including vaccines, as a carrier

c for other immunogenic preparations including vaccines, as a carrier

influenzae such as meningitis, epiglottitis, septicaenia and ottlis

media. Recombinant production of Hia davours high recovery of the

mount of recovery than a full-length protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     QVGADGVKFAKVDKGNSSTGIDGTSRITKDQIGFTGANGSLDTTKPHLTKDKLKVGEVEI 1031

sequence represents a Haemophilus influenzae adhesin (Hia) the non-typeable Haemophilus influenzae (NTH1) strain 33 d proteins have antiinflammatory, auditory and antibacterial and can be used in the production of a vaccine. An composition comprising an Hia gene, a polypeptide encoded nee, or a recombinant Hia polypeptide is useful for inducing gainst disease caused by Haemophilus strains in a host, preferably a human. An Hia protein is useful as an immunogenic preparations including vaccines, as a carrier munogenis, and in the generation of diagnostic reagents. Hia retaring diseases caused by the infection of Haemophilus r treating diseases caused by the infection of Haemophilus aemophilus influenzae adhesin; NTHi; infection; vaccine; emophilus influenzae; antiinflammatory; auditory; meningitis; epiglottitis; septicaemia; otitis media; cid encoding Hemophilus influenzae adhesin protein, for and vaccines and for treating Hemophilus influenzae --SNSAISAGTHAGTQAK----KSDGTAGTTTTAGATGTVKGFAGQTAV 2180 SRRIQNVAAGEVSATSTDAVNGSQLYKATQGIANATNELDHRIHQNENKA 2240 NSYSVGNNNQFIDATQTDVFGVGNNI-----TVTESNSV---luenzae adhesin (Hia) protein from NTHi strain 33. d; Protein; 1002 AA. nogenic; antigen. ang Y, Klein MH; 275pp; English. 00WO-CA00289. 99US-0268347. .rst entry) IT LAB LTD. |: : gygw 1000 **SFHF 2314** .uenzae. /59.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   656 PN--TFETITFAGENCISISNDIAKGK----VKVGIDPINCLTTPKLTVGSDKDGKTQL 708
                                                                                                                            The present sequence represents an antigenic protein derived from Haemophilus paragallinarum strain C-53-47. The antigenic protein stimulates the production of HI antibodies in fowl. The protein and DNA coding for it can be used in the preparation of vaccines for the prevention of chicken infectious coryza (CIC). The protein and its antibodies can be used in the diagnosis and treatment of CIC.
Antigenic polypeptide from Haemophilus paragallinarum induces HI antibody production - and is useful for diagnosis of and preparation of vaccines for chicken infectious coryza

                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents an antigenic protein derived from Haemophilus paragallinarum strain A-221. The antigenic protein stimulates the production of HI antibodies in fowl. The protein and DNA coding for it can be used in the preparation of vaccines for the prevention of chicken infectious coryza (CIC). The protein and its antibodies can be used in the diagnosis and treatment of CIC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                              Antigenic polypeptide from Haemophilus paragallinarum induces HI antibody production - and is useful for diagnosis of and preparation of vaccines for chicken infectious coryza

The present sequence represents a Haemophilus influenzae adhesin (Hia)

protein from the non-typeable Haemophilus influenzae (NTH1) strain K9.

Ha genes and proteins have antiinflammatory, auditory and antibacterial
activities, and can be used in the production of a vaccine. An
activities, and can be used in the production of a vaccine. An
immunogenic composition comprising an Hia gene, a polypeptide encoded
by an Hia gene, or a recombinant Hia polypeptide is useful for inducing
by an Hia gene, or a recombinant Hia polypeptide is useful for inducing
protection against disease caused by Heemophilus strains in a
susceptible host, preferably a human. An Hia protein is useful as an
antigen, in immunogenic preparations including vaccines, as a carrier
antigen, in immunogenic preparations including vaccines, as a carrier
for other immunogenic preparations including vaccines, as a carrier
antigen, in immunogenic preparations including vaccines, as a carrier
for other immunogenic preparations including vaccines, as a carrier
antigen, in production of Hia favours high recovers of the
media. Recombinant production of Hia favours high recovery of the
protein compared to the low recovery of neative protein from Haemophilus
influenzae species. A truncated protein has a significantly higher
amount of recovery than a full-length protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      KLTV-----GUNNGKGIVIDSKDGONTIFGLSNTLAN-VTNDGAGHAL-SQGLANDTDKT 1200

MEDIUW TYPE: Floppy disk

COMPUTER: IBM PC Compatible

OPERATIOS SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.30

CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/968 685A

FILING DATE: No. 621498lember 12, 1997

CLASSIFICATION:
ATTONREY/AGENT INFORMATION:
NAME: Baldwin, Geraldine F.
REGISTRATION NUMBER: 31,232

REGISTRATION NUMBER: 31,232

REGISTRATION NUMBER: 31,232

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 5977336

GENERAL INFORMATION:
APPLICANT: Barenkamp, Stephen J
TITLE OF INVENTION: High Molecular Weight Surface Proteins
TITLE OF INVENTION: of No. 5977336-Typeable Haemophilus
NUMBER OF SEQUENCES: 1
CORRESPONDENCE ADDRESS:
ADDRESSEE: Shoemaker and Mattare, Ltd.
STREET: 2001 Jefferson Davis Hwy., 1203 Crystal Plaza
STREET: Bldg. 1 CITY: Arington
STATE: Virginia
CONTRY: U.S.A.
Z1D: 2202-0286
Z2D: 2202-0286
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/617,697
FILING DATE: 01-APR-1996 1560 TQNEFTTKP 1568 1657 LTNIKSTLP 1665 RESULT 12 US-08-617-697-9 1048 1107 qq g Db δý Dρ δ g οy g δ q δ qq ŏ QQ δ q Qγ QQ οy ΟŸ δ
